01 PROFILE

I started designing a website in 2015. At first, I started implementing and customizing WordPress templates, and after 3 years, I started with the Laravel framework, and at the same time, I learned and developing of Android applications by Java, and finally, I became familiar with the Flutter framework. I had acceptable experiences working with startups and e-commerce platforms, tourism, services and treatment in Iran, Oman and Kuwait. I was always looking to use new technologies and try to be up to date.
